

Protect the Protectors

What is the Protect the Protectors Campaign?

NCOAA launched this campaign to ensure all emergency responders have the proper CO Safety equipment. Our partners CrowCon and MicroDot® are generously offering this equipment at deeply discounted pricing.

Why is CO Safety Equipment Important?

Emergency responders need CO Safety equipment to protect themselves and their communities from negative health effects of CO exposure:

- Numerous studies have demonstrated adverse health effects associated with CO exposure, including heart failure, stroke, cognitive and motor impairments, sensory-motor deficits, emotional changes, cognitive deficits, spontaneous abortion, and fetal death.
- Emergency responders may be exposed to CO during daily runs and also overhaul, if respiratory gear is removed.
- The International Association of Fire Chiefs, strongly warn of health hazards from occupational exposure to CO among firefighters.
- Over half of emergency responder fatalities are from line-of-duty sudden cardiac events; given that CO exposure is linked to heart disease, emergency responders are at significant risk of cardiac injury caused or exacerbated by CO.

Carbon Monoxide Gasman Monitor

The Gasman full function personal single gas monitor is compact and lightweight yet is fully ruggedised for the toughest of industrial environments. Featuring simple single button operation, it has a large easy-to-read display of gas concentration, and audible, visual and vibrating alarms.
